

## Elevated Working Platform (EWP)

EWP operation is a common part of rigging in the CaPT sector, there are several different courses available:

- EWP under 11m
- EWP Over 11m
- Boom type EWP, boom length 11m or more

**Boom type EWP, boom length 11m** or more is the only course that is a High-Risk Work License (HRWL) and allows you to operate the many different types of EWP's, this is the most comprehensive course.

Please note: every HRWL completed requires a **Victorian postal address** and an **additional fee of around \$70** for issuing your license.

### Training providers

#### [Holmesglen TAFE](#)

#### [Foresite training](#)

Foresite training is approved for skills first funding but are currently preparing to start the program and cannot give specific information. Check back end of Jan.

Please be aware that courses are aimed at the construction industry and can often reflect the attitudes, culture and demographics of that industry.

If you have concerns about the accessibility and/or cultural safety of these courses, please contact me directly to discuss ([christian@tna.org.au](mailto:christian@tna.org.au)). It may be possible to group students together, enabling them to support each other throughout the training course.
